Education

Louisiana State University (LSU) | Honors College | Baton Rouge, LA

May 2027

B.S. Computer Science with Concentration in Software Engineering

GPA: 4.0

Coursework: AI and LLM Development, Object Oriented Programming, Software Systems Development

Experience

AI and Automation Engineer

Aug 2026 -- Present

Manship School of Mass Communication, LSU

Baton Rouge, LA

- Built a custom-configured LLM-powered wiki for localized news retrieval across a statewide journalism network.
- Designed automated content pipelines with n8n, Make, and LLM agents, removing manual publishing steps.
- Integrated multi-platform APIs to automatically route and publish stories, newsletters, and social media posts, eliminating manual distribution.

Software Engineering Intern

May 2026 -- Aug 2026

Fast Enterprises, South Carolina Department of Revenue

Columbia, SC

- Shipped C# features and UI updates for a tax portal used by 700+ officers and taxpayers.
- Optimized SQL queries with SQL Server Management Studio, improving performance and ensuring accurate data retrieval across databases with 2M+ taxpayer records.
- Consulted with state agency stakeholders to translate business requirements into technical solutions.

AI Engineering Contractor

Aug 2025 -- Dec 2025

Entergy

Baton Rouge, LA

- Led 5 engineers to develop, test, and deploy an AI-driven career pathing tool using Python, React, and FastAPI on AWS, modeling over 6,000 roles to recommend optimal career progressions for 10k+ employees.
- Built an LLM-based graph model reaching 92% accuracy in predicting career progressions.

Robotics Research Assistant

Aug 2025 -- Aug 2026

College of Engineering, LSU

Baton Rouge, LA

- Built a RobotStudio add-in using modular C# architecture and Git version control.
- Debugged and validated robot workflows by testing edge cases and failure modes in RAPID code generation.
- Built data pipelines to sanitize, structure, and validate technical inputs for LLM-driven features.

Projects

Rooted | React Native, Typescript, Firebase | github.com/alexhollier/Rooted

- Built a 4-feature iOS/Android volunteer app with opportunity discovery, map view, QR check-in, and hour tracking.
- Implemented event discovery and volunteer sign-up flows using a scalable, user-friendly mobile interface.
- Debugged cross-platform issues, tested user flows, and resolved performance bottlenecks across iOS and Android builds.

Melodify | React Native, Typescript, Firebase | github.com/alexhollier/Melodify

- Built an iOS and Android application to help students learn music theory with engaging challenges and lessons.
- Implemented real-time audio recording and playback for interactive practice tools.
- Designed practice modules covering rhythm, notation, and music theory fundamentals.

Technical Skills

Languages: Java, Python, C, C#, TypeScript, JavaScript, SQL

Frameworks & Libraries: React, PyTorch, React Native, FastAPI, Firebase

Developer Tools: Git, AWS, Docker, SSMS, n8n, Make
